EDUCATION

University of Minnesota Expected Graduation: December 2026

Bachelor of Science in Computer Science; GPA: 3.80 Minneapolis, MN

- **Relevent Coursework**: Data Structures & Algorithms, Software Engineering, Program Design & Development, Machine Architecture, Operating Systems, Secure Software Systems, Internet Programming
- **Awards**: 6x Deans List: Fall 2023 - Spring 2026

EXPERIENCE

Daikin Applied Americas May 2026 – Aug. 2026

Software Engineering Intern Plymouth, MN

- Modernized applications by upgrading nine applications to .NET 10, testing changes in lower environments, and supporting production releases.
- Architected a solution for migrating file consumption from a network drive to Azure Blob Storage, producing approved business, architecture, and testing documents.
- Built and unit tested a C# NuGet package for file consumption and implemented CI/CD package publishing through Azure DevOps Pipelines.

University of Minnesota Sept. 2025 – May 2026

Teaching Assistant, CSCI 3081W - Program Design & Development Minneapolis, MN

- Hosted weekly office hours to help students overcome obstacles and better understand material
- Fairly and efficiently completed grading for projects, labs, assignments and exams
- Lead weekly labs by summarizing the week's material, explaining the requirements, and grading the results

PROJECTS

Package to Retrieve Files From Cloud | C#, .NET, Azure DevOps

- Designed and developed a reusable NuGet package for consuming files from Azure Blob Storage via an internal API while preserving existing downstream workflows.
- Collaborated with DevOps engineers to implement package publishing through Azure DevOps Pipelines and created work items to support adoption of the solution

Full-Stack Blog Website | JavaScript, HTML/CSS, MySQL, Node.js, Express.js

- Developed a full-stack blog website using Express.js, and MySQL, supporting user authentication, role-based access control, and persistent storage of posts and comments.
- Implemented CRUD functionality for blog posts and comments, developed RESTful backend routes, and created a responsive front end using HTML, CSS, and JavaScript.

Drone Delivery Simulation | C++, Jira, Docker, UML

- Developed a C++ drone delivery simulation that modeled package delivery across the University of Minnesota campus using object-oriented design, SOLID Principles, and multiple pathfinding algorithms.
- Implemented Factory, Strategy, and Observer design patterns and collaborated on an Agile team using Jira, GitHub, and Docker to deliver features including drone handoffs and battery recharging.

SKILLS

Languages : C++, C#, Python, JavaScript (Express.js), Java, HTML/CSS, SQL (MySQL, PostgreSQL, MS SQL Server)
Developer Tools : GitHub, Azure DevOps, Jira, UML, Docker, Postman, .NET, Node.js, VS / VS Code, Design Patterns
